## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/19/03 has been entered.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1) Claims 8-13, and 16-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Egelhof et al (US 6,159,341) in view of Huovila et al (US 6,270,624) and in further view of Turner et al (EP 0465698). Egelhof discloses a method of making a multiply paper comprising of two web former units wherein headbox (8) provides a first base ply and multi-layer headbox (26) provides a second ply (Figure 1 and Col. 5, lines 30ff). Egelhof is silent disclosing the stock feed system of the headbox. However, Houvila discloses stock feed system for a headbox having a flow of fresh stock being divided into three component flows (5a-5c) wherein an admixture is supplied to the

Art Unit: 1731

component flow that would make up the outer layer/face before pump (19a1) (Col. 1, lines 55ff and figure 1). Houvila's headbox provides for a control of the desired chemicals and fillers to be added to a web and obviates additional storage facilities due to its single fresh stock feed system (See Bridging paragraph of col. 3-4). In view of Turner which teaches that the face of a second ply has a high amount of pulp stock fines in order to effect a greater ply-bonding affinity with a first base ply, at the time the invention was made, it would have been obvious to a person of ordinary skill in the art to have inserted Houvila's multilayer headbox with Egelhof's web forming method in order to provide a better feed control of admixtures that would be placed at the face of the second ply assuring bonding with the base ply and optionally reduce storage facilities as taught by Houvila. Additionally as for the claimed web speed limitation, the claimed speed of the web are current operational speeds that would be expected from Egelhof forming unit.

### ***Response to Arguments***

Applicant's arguments with respect to claims 8-13 and 16-19 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

References A-B in PTO-892 have been cited to show the state of the art.
